

Figure 1: Linear prediction plot of RSV antibody concentrations in pregnant women and infants in Seattle and Alaska at two prenatal visits (visit 1 & 2) and delivery (cord blood) in Seattle and at one prenatal visit (visit 1) and delivery in Alaska. Vertical bars indicate 95% CIs.

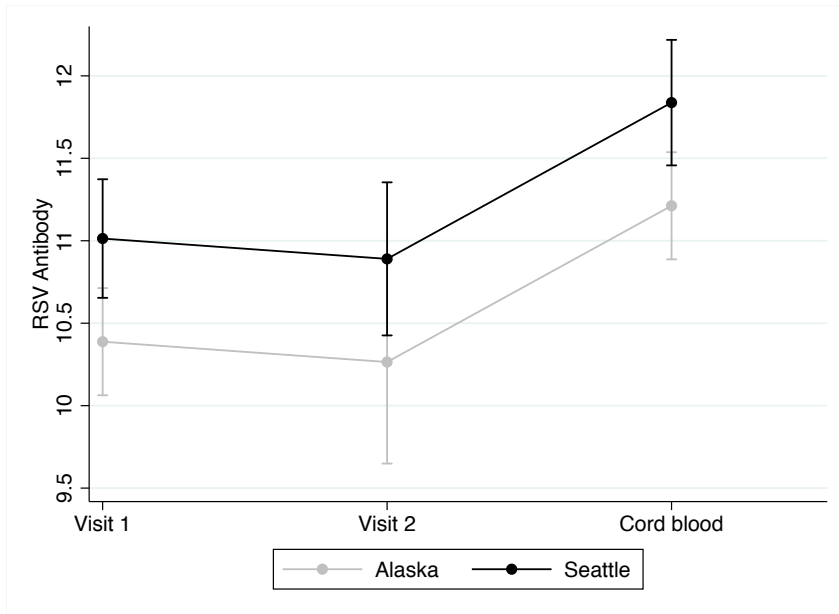

Figure 2: Geometric mean titer of hemagglutination inhibition antibodies in pregnant women in Seattle, WA. GMTs were measured at two prenatal visits (visit 1 & 2) and delivery (cord blood). Vertical bars indicate 95% CIs.
